PROFESSIONAL SUMMARY

Full Stack Engineer with 7 years of experience building production systems in TypeScript, Python and Java, including six-plus years of Angular, RxJS and NgRx. I author the design specification for each feature I own and drive it to agreement before implementation. Currently own LLM orchestration, agent tooling, and real-time collaboration at Kapsy, a multi-tenant AI work platform, across a delivery lifecycle spanning REST API design, machine learning and NLP, design systems, and automated testing in CI.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL
AI and Machine Learning: LLM orchestration and routing (Anthropic, OpenAI, Azure OpenAI), Model Context Protocol (MCP) tool servers, agent reasoning loops, prompt caching, RAG, embeddings and vector search, guardrails, model-output validation, LLM evaluation, transformers, scikit-learn, NLP
Backend: FastAPI, Spring Boot, REST API design, microservices, event-driven and distributed systems, message queues, background workers, idempotent APIs, webhooks, multi-tenant data partitioning, optimistic concurrency, caching, async programming, authentication and authorization (OAuth2), access control lists
Frontend: Angular 2+, RxJS, NgRx, TypeScript, state management, reactive programming and observables, component library and design system development, HTML5, CSS3, SCSS, TailwindCSS, React 19
Testing: Playwright, Cypress, pytest, Jasmine, end-to-end and unit testing
Engineering Practices: technical design specifications, architecture and design review, cross-repository code review, CI/CD, Agile and Scrum, test automation, incident and defect triage
Databases and BI: MySQL, MongoDB, vector databases, Power BI
Cloud and Tooling: Microsoft Azure, Git, Postman, Swagger, OpenAPI

PROFESSIONAL EXPERIENCE

Apaha (Kapsy) Jul 2026 - Present
Full Stack Engineer, AI Platform *Bengaluru, India (Remote)*

Payroll entity: AIM Resume Services Private Limited, India

- Build the AI platform and media surfaces of Kapsy, a multi-tenant AI work platform spanning CRM, project tracking, course authoring, a landing-page builder, video, and live meeting rooms.
- Designed a provider-agnostic LLM routing layer in Python that handles every AI call in the product, with tiered model routes and automatic failover across Anthropic, OpenAI, and Azure OpenAI; implemented prompt caching that reduced inference spend by approximately 5x.
- Built an agent reasoning loop and MCP tool server exposing 270+ typed tools, enabling AI agents to perform CRM writes, document authoring, and live page edits, each behind a per-tool user consent gate with full undo.
- Engineered real-time collaboration using server-sent events and WebSockets for token streaming of model output, applying ETag optimistic concurrency to eliminate last-write-wins corruption during concurrent human and agent edits.
- Built the landing-page builder and its AI editing surface: agent tools that add and edit page sections, with guardrails that refuse a value the model invented or a slot the layout cannot draw; cut its eager JavaScript bundle 54%, from 1,290 KB to 598 KB gzipped, by code-splitting the rich-text editor stack and premium section packs behind dynamic imports.
- Built the video platform end to end: a browser recorder, a library whose nested folders cascade ACL permissions through an entire subtree, and signed-manifest playback that lets guests stream without an account, plus LiveKit rooms and webinars with host controls and recording capture.
- Work across a multi-tenant backend: partitioned per-tenant data access, idempotent webhook handlers, queue-backed background workers, and invalidation across layered caches.

Optum Dec 2025 - Jul 2026
Software Engineering Lead *Hyderabad, India*

- Maintained and extended a centralized data product catalog enabling dataset discovery, ownership visibility, and governed access requests, improving data accessibility and auditability across engineering teams.
- Improved the end-to-end data access lifecycle covering request, approval, provisioning, and revocation through added automation, failure handling, and real-time tracking, reducing manual intervention and strengthening compliance.

Soroco India Aug 2022 - Dec 2025
Software Engineer *Bengaluru, India (Remote)*

- Built and scaled an enterprise work observability product that captures user interaction data to reduce operational cost and effort and drive measurable business growth.
- Designed and delivered scalable REST APIs using Java, Spring Boot, Postman, and Swagger, mapped directly from Figma flows, improving UI to backend alignment and reducing integration defects by 30%.
- Developed and maintained Soroco's proprietary design system (SNDS) using Angular, RxJS, NgRx, and TypeScript with custom component tooling, accelerating design cycles by 40% and lowering front-end defects by 25%.

- Led multiple high-impact proofs of concept and drove cross-repository code review with senior engineers, a key factor in reducing urgent monthly bugs from 15+ to under 5.
- Optimized front-end performance and analytics instrumentation across critical user workflows, improving page responsiveness by 30% and enabling data-driven product decisions.

Cognizant Technology Solutions Feb 2022 - Aug 2022
Software Developer *Pune, India (Remote)*

- Developed and maintained the Pilot Trading System frontend using Angular, improving UI performance and increasing user engagement by 15%.

Tata Consultancy Services Feb 2019 - Feb 2022
Assistant Software Developer *Thane (Mumbai), India*

- Built a complete User Management System using Java (Spring Boot) and Angular, optimizing API workflows and improving system response time by 20%.
- Developed machine learning and NLP solutions in Python, including a document summarization model built on transformer architectures that reduced manual processing effort by 60%, and a text classification model for shareholder queries achieving 92% accuracy using scikit-learn and ensemble methods.
- Created Power BI dashboards for Tata Innovista, streamlining project analysis and reducing decision-making time from 5 hours to 1.5 hours.

EDUCATION

Bachelor of Technology | KIET Group of Institutions, Ghaziabad | 2014 - 2018
Higher Secondary (Class XII) | St. Thomas, Lucknow | 2012 - 2013
Secondary (Class X) | St. Thomas, Lucknow | 2010 - 2011

PROJECTS

- Snake Game (Python): Built from scratch with custom game logic, scoring, and real-time movement.
- Pong Game (Python): Interactive paddle physics, collision detection, and smooth gameplay mechanics.
- Road Crossing Arcade Game (Python): Sprite movement, obstacle handling, and progressive difficulty.
- To-Do List Application (Node.js, MongoDB): Full-stack app with dynamic pages, complete CRUD operations, and a clean UI workflow.

AWARDS AND RECOGNITION

- Spot Award, Soroco (2025)
- 3rd place, Soroco Hackathon (2024)
- Torch Bearer Award, Soroco (2023)
- Recognized as Digital Cadre, TCS (2021)
- Special Initiative Award, TCS (2020)
- TCS Gems, for completing the TCS Hackathon (2020)
- On-Spot Star Team Award, TCS (2019)
- ILP Kudos Award, TCS (2019)
